To whom it may concern

Systems Interface Limited were awarded the contract to supply, install and commission a new localizer and Distance Measuring Equipment at Donegal Airport in January 2011.

The equipment installed was the MOOG Fernau 2020 DME and the Normarc 7013B localizer with associated 12 element antenna array and Far Field/ Offset Monitoring systems.

The DME/LLZ was commissioned and underwent flight inspection at the end of June 2011 and has been in constant service since.

I would have no hesitation in recommending Systems Interface Limited or the navigational equipment supplied to potential customers.
