To whom it may concern

Letter of Reference – Remote Tower Centre

Systems Interface was contracted to provide consultancy services including Feasibility Study, Safety Assurance, System Design and Production & Management of a Closed Tender Process for the Contingency Remote Tower Services Equipment at Jersey Airport under the Technology Partner framework agreement between Systems Interface and Ports of Jersey.

Following these phases, Systems Interface was contracted to deliver the Jersey Airport Contingency Remote Tower Services Project to include Remote Tower Equipment, enabling infrastructure, overall Project Management, Design Review Process, Safety Case, Technical handover, site management and installation services.

This prestigious and first of type project was delivered successfully, within budget and full Operational Handover & DCA Approval of C-RTM was achieved on the 7th May 2019.

We were pleased with both the Project Management and the Engineering Team on site and we would recommend their services for future projects.

Yours faithfully

Steve Savva

Programme Manager
