To Whom it May Concern,

Re Systems Interface Limited

Systems Interface Limited were awarded the contract for the complete upgrade of the Air Traffic Control facilities at London Southend Airport as part of a multi upgrade project. Systems Interface won this prestigious contract through the combination of a competitive commercial proposal coupled with a detailed technical design, which fully met the Airport's requirements for this specialised area.

The Avionics project is a 'turnkey' delivery, with Systems Interface responsible for all aspects from initial design, through to civil works, installation, commissioning and safety documentation for all ATC Systems in the new Control Tower building and an upgrade of Airfield Ground Lighting and Navigational Aids.

Systems Interface has completed Phase 1 of the London Southend Airport project for Stobart Group with the opening of the new ATC Control Tower in March 2011. The transition from the old to new Control Tower has been seamless and highlighted the good planning, project management, and technical skills of Systems Interface. The company is now concentrating on Phase 2 of this project which involves the supply of various Nav aids, including two ILS systems, a DME and two IRVR systems together with a complete replacement of all Airfield Ground Lighting. This is due to complete in December 2011 alongside the runway extension project.

I would be pleased to recommend Systems Interface Limited to potential customers.

Yours faithfully
