

### About Systems Interface

A leading project-based aviation systems integrator with many years specialist experience delivering turnkey projects to civil and defence airports and Civil Aviation Authorities worldwide.

Systems Interface manages complex logistical and technical requirements, sourcing and supplying fully integrated bespoke Air Traffic Control (ATC) systems, navigational aids, and airfield lighting all designed, installed and commissioned to exacting requirements.

Services include system design, upgrading existing ATC Systems, completely new turnkey installations, safety cases, training and maintenance and civil works.

A dynamic project-based organisation with a proven track record for delivering complex projects on time and in budget.

## **Systems Interface install four ATIS Systems at Airports in Central Asia**

Systems Interface (SIL), based in the United Kingdom, has completed a Turnkey contract to supply, install and commission four ATIS (Automatic Terminal Information Service) systems at four airports in a central Asian state.

The Turnkey contract, in cooperation with SIL's key supplier Copperchase, was delivered on-time and in budget by SIL engineers over a three-week period. The contract was project managed by SIL throughout, including training for local engineers and Air Traffic Controllers.

This state-of-the-art equipment provides a cost effective and reliable automated system for the country's Air Navigation Service Provider. It is designed to provide automated delivery of meteorological and operational aerodrome information to arriving and departing aircraft, as well as current and forecast weather at alternative aerodromes.

The system is designed to integrate with ED-137 standard VoIP (Voice Over IP) radios and has the potential to be upgraded to include a D-ATIS (Digital - Automatic Terminal Information System).
